### PROFESSIONAL SUMMARY

Full-Stack Engineer with experience building scalable, end-to-end web applications using the MERN stack and Next.js (App Router). Skilled in bridging the gap between responsive user interfaces and secure backend architectures. Proven ability to quickly master modern development workflows, implement robust user authentication systems, and collaborate in Agile environments to deploy maintainable software solutions.

### TECHNICAL COMPETENCIES

- |                                  |                                                                              |
|----------------------------------|------------------------------------------------------------------------------|
| • <b>Core Languages</b>          | JavaScript (ES6+), HTML5, CSS3                                               |
| • <b>Front-End Ecosystem</b>     | ReactJs, React Router, NextJs(App Router), Context API, Tailwind CSS, Sooner |
| • <b>Back-End &amp; Database</b> | Node.js, Express.js, MongoDB, RESTful APIs, JWT, Jose-JWKS                   |
| • <b>Tools &amp; Security</b>    | VS Code, GitHub, Netlify, BetterAuth, Figma, Vercel, Postman                 |
| • <b>Soft Skills</b>             | Communication, Adaptability, Teamwork, and Proactivity                       |

### WORKING EXPERIENCE

**Front-End Developer (Remote, Full Time) | Ivey Solutions** [Oct 2023 to December 2025]

- Engineered responsive, cross-browser compliant web interfaces using **HTML5, CSS3, and vanilla JavaScript** to translate Figma layouts into pixel-perfect templates.
- Spearheaded the team's transition toward component-driven architecture by developing modular, reusable UI layouts using **React.js** during the final phases of tenure.
- Collaborated in an Agile remote environment using **Git/GitHub** for version control, code reviews, and meeting strict sprint deliverables.

### PROJECTS

[DocAppointment](#) (A Full Stack Application)

[Live](#) | [Client Code](#) | [Server Code](#)

**Description:** Engineered a high-performance medical appointment scheduling ecosystem that eliminates clinical booking friction and enforces real-time synchronization between patient requests and provider availability.

**Key Features:**

- Data-Isolated Booking Pipeline:** Built a secure booking backend using custom Express middleware that checks user IDs on every request, ensuring patients can only view or change their own private MongoDB appointment data.
- State-Controlled UI Mutations:** Created a live dashboard that updates MongoDB instantly, letting users edit or cancel appointments without any page reloads, screen flickering, or state loss.
- URL-Preserved Query Routing:** Developed an optimized dashboard search index coupled with Next.js URL query state parameters, ensuring complex doctor filtering logic remains fully bookmarkable and persistent across hard browser reloads.

**Technologies Used:** Next.js, React.js, Tailwind CSS, Sonner, Node.js, Express.js, MongoDB, Better-Auth (JWT & Sessions), Jose-JWKS Remote Verification, File System (FS) Utilities, Dotenv

[LibConnect](#) (Library Management Application)

[Live](#) | [Code](#)

**Description:** Engineered a secure, full-stack library management application designed to digitize asset borrowing workflows, optimizing server-side operations to reduce page-load latency and eliminate client-side state inconsistencies.

**Key Features:**

- Instant Server-Side Search & Filter:** Fixed inventory rendering delays by using Next.js Server Components and URL parameters to process book categories and searches instantly without slowing down the browser.
- Session-Isolated User Dashboards:** Enforced strict multi-tenant data boundaries by checking server-side session cookies, ensuring users can only fetch, view, and interact with their own personal account metadata.
- Schematic Multi-Field Mutations:** Engineered an isolated client-to-server gateway using BetterAuth mutation hooks to securely update individual database profile documents without triggering application-wide cache invalidation.

**Technologies Used:** Next.js, React.js, Tailwind CSS, Swiper.js, React-Toastify, Node.js, Express.js, MongoDB, Better-Auth, File System (FS) Utilities, Dotenv

### EDUCATION & PROFESSIONAL COURSES

- ❖ **Bachelor of Honours in Mathematics** ( National University Of Bangladesh )
- ❖ AI Driven Full Stack Web Engineer - [Programming Hero](#)
- ❖ Fundamentals Of Web Development - [Sorobindu](#)

### LANGUAGES

Bangla (Native)

English(Professional Working Proficiency)

Hindi
